Optinet

4G Back-up and Remote Access

A high performance, robust service with the largest 4G reach in the UK that can be deployed within 48 hours to support business continuity and deliver reliable connectivity to hard-to-reach geographic areas.

Our 4G business service helps you expand your reach and operational capabilities across an extensive, reliable network footprint that's unconstrained by wires. Operating across all major networks on Optinet's own APN, 4G services reach 97% of the UK population and 75% of the landmass, so you can keep customers and colleagues connected with each other and business critical applications, wherever they're working.

Whether you're looking for a diverse back-up solution as part of a business continuity plan, enabling remote workers, extending your network into areas that are difficult to access, or support for IoT applications, 4G can deliver. Services can be provided within MPLS, which helps to control data flows, improves security, and ensures the same IP MPLS auto-failover. When provisioned with Direct Internet Access, customers benefit from an Optinet public IP address that allows traffic to use our state-of-the-art network, as well as the capability to present the same public IP auto-failover on ADSL, FTTC, EFM, Ethernet and 4G.

Keep your business up and running, whatever happens

When the unexpected happens, like landline failure or power loss, unprepared businesses stop working. That can result in missed opportunities, missed deadlines, penalty charges, and lost revenue. Our 4G service provides the wireless backup you need to protect your business from disruption.

• Stay connected to the Internet
• Stay connected to private voice and data networks
• Stay connected to customers and colleagues
• Maintain a reliable backup or extend network coverage for business locations, including triage sites, disaster areas, branch offices, retail stores, and warehouses
• Stay operational even during wired line failures

Hands-on support

We offer the highest standards of professional support designed to ensure your services operate at optimum performance and continues to align with your business needs.

From a consultative approach to solution design and deployment, to providing on-going commercial and technical advice, your account team will help you get the most out of your solution, keep you updated on the latest technology trends, and adapt services as your requirements change.
